IN THE CLAIMS

1. (THRICE AMENDED) [AN] An oval elliptical mirror assembly comprising:

(a) an oval mirror lens the lens having a periphery, the mirror lens being a substantially convex ellipsoid with a major axis and a minor axis, the minor axis being different from the major axis, the mirror lens having a reflective surface and a nonreflective rear surface;

(b) means for supporting the mirror lens;

(c) means for mounting the mirror lens to a mounting surface; and

wherein the mirror lens further comprises an ellipsoid with a first major axis having a [single] varying radius of curvature.

8. (NEW) The oval elliptical mirror assembly of Claim 1 wherein the radius of curvature is at a minimum at the periphery of the lens.

9. (NEW) The oval elliptical mirror assembly of Claim 7 wherein the minor axis has a varying radius of curvature.
